Fires are dangerous, expensive and stressful – and unfortunately more common than you think. Have you experienced a fire? We hope you haven't... and never will. Regardless of your experience, in this presentation we look at what happens when there is a building fire – including ways to prepare and avoid fires, site hazards and the precautions you can take. Learn about the importance of evidence when determining the causes of fires and costly secondary damage from water and toxic debris. And last, but not least, take a look at the restoration process including cleanup, odor removal and encapsulation.
